## **NEW JUNO LED PENDANTS OFFER BOLD, BEAUTIFUL DESIGN WITH REDUCED ENERGY CONSUMPTION**

*The best of all possible worlds is now available*

**DES PLAINES, III.** (March 10, 2010) — Known for their decorative pendants, Juno Lighting Group announces state-of-the-art LED pendants offering energy savings and reduced operating costs. The Juno LED Decorative Pendant collection features brilliant style, shapes and materials ranging from luminous artisan-crafted glass to the fashionable simplicity of lustrous metal.

The LED Decorative Pendants offer a 75 percent reduction in energy consumption, compared to equivalent halogen lighting. The 50,000 hour service life provides additional savings by virtually eliminating re-lamping and maintenance costs.

“Whether your application is retail, commercial or residential, the Juno LED Decorative Pendants offer both stunning good looks and cost efficiencies,” said Michael McCown, director of product management-Trac Lighting, Juno Lighting Group. “In addition to being an economical choice, they’re also an environmentally responsible option since our LED pendants are free of toxic mercury, lead and PCBs. They also do not have UV or IR emissions and are RoHS compliant.”

Juno LED Decorative Pendants employ high-output, low-power LEDs totaling only five watts per fixture, producing a minimum of 170 lumens. This replicates the aesthetics of a 20 watt halogen pendant but with as little as 25 percent the energy consumption. The unique LED light engine design is enclosed with a proprietary silicone diffusion ball which protects the LEDs while providing uniform shade illumination and exceptional down-lighting characteristics. Best of all, like their halogen counterparts, these energy-efficient LED luminaires are fully dimmable.
